Subject: Please get back to me asap.

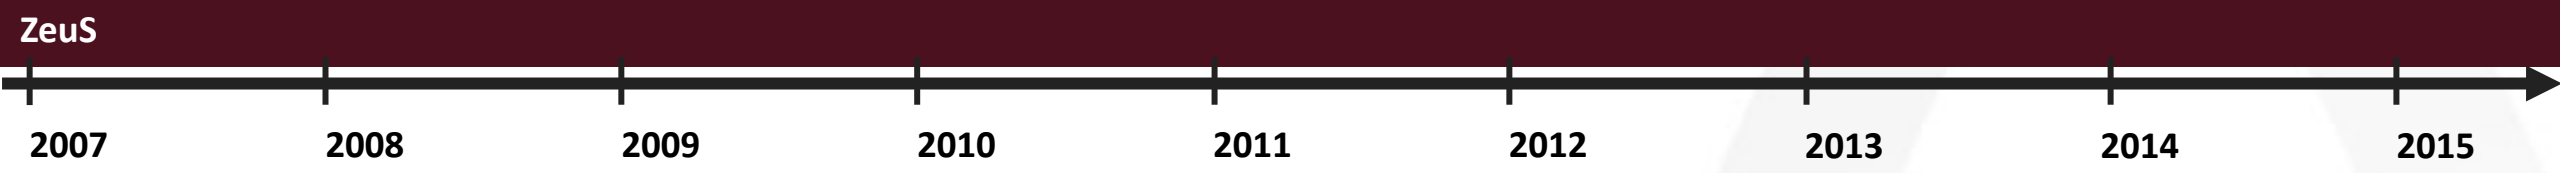

Sue,

Please do you have a moment? Am tied up in a meeting and there is something I need you to take care of.

We have a pending invoice from our Vendor. I have asked them to email me a copy of the invoice. I will be highly appreciative if you can handle it before the close of banking transactions for today. I can't take calls now so an email will be fine.

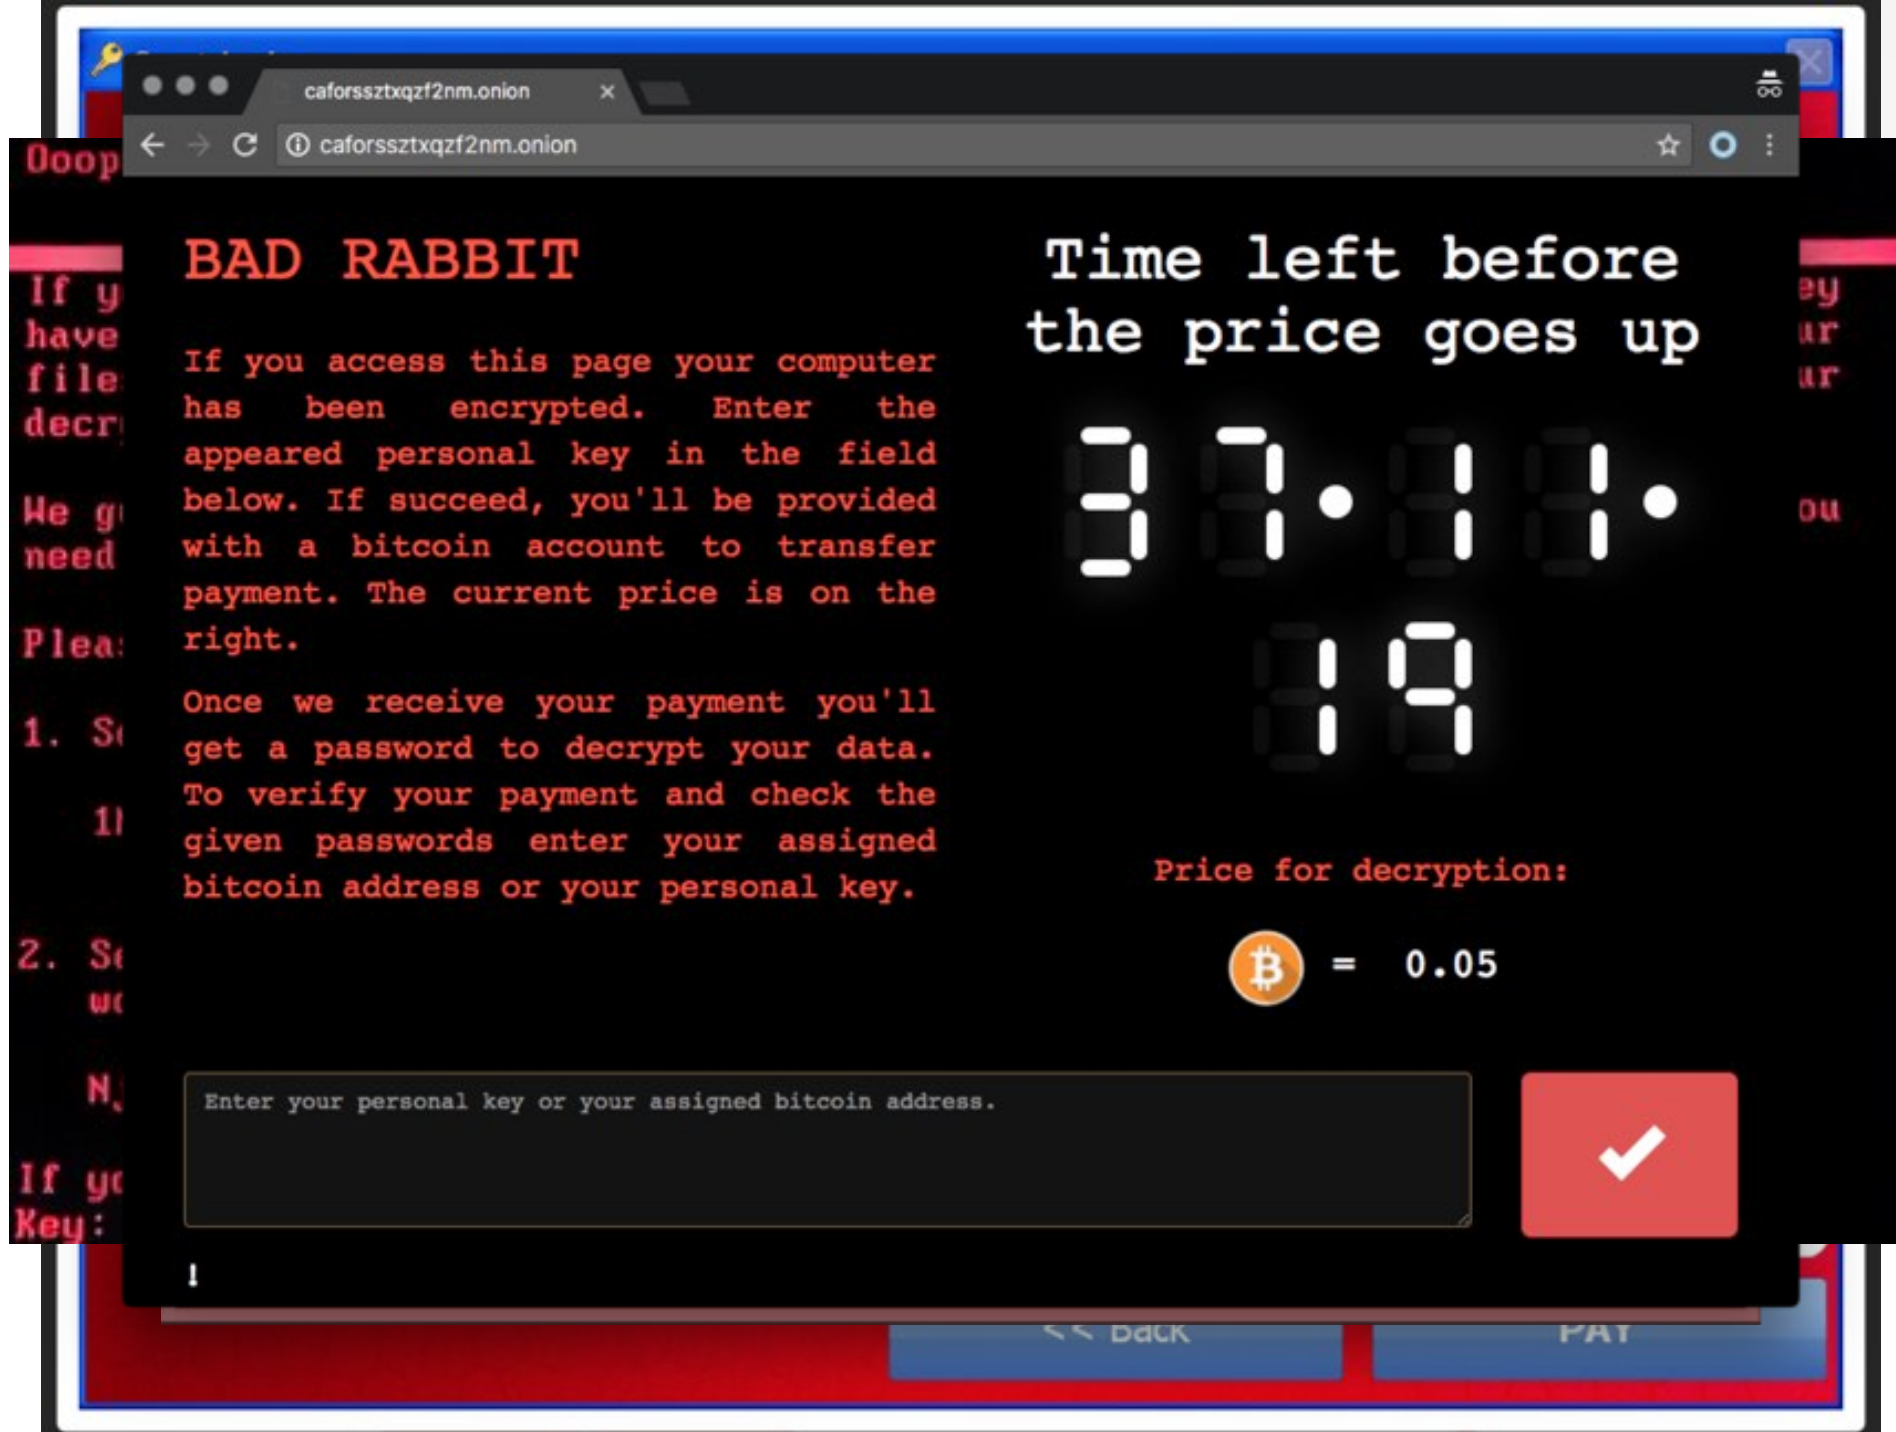

Robert

The image shows a screenshot of a YouTube search results page for the query "cvv dumps". The search bar at the top contains the text "cvv dumps" and is circled in red. Below the search bar, the text "About 2,370 results" is also circled in red. The page displays a list of search results. The first result is a video titled "How to get dumps with pin online - Buy dumps online" with a thumbnail showing a list of data. The second result is "Top 5 popular CC and CVV sites for carding & hacking" with a thumbnail showing a website interface. The third result is "CVV Dumps, Credit Cards, Bank Login, Paypal Login, Gift Cards @ ICQ 7 [redacted] 8" with a thumbnail showing a person's face and the text "icq 72 [redacted] 8". This result is circled in red. The fourth result is "dumps without pin unicc" with a thumbnail showing a website interface. The fifth result is "Carding And CVV Hacking Tutorial Buy anything Free , How To Buy Bitcoins safely" with a thumbnail showing a person's face. The left sidebar of the YouTube interface is visible, showing navigation options like Home, Trending, Subscriptions, and a LIBRARY section with History, Watch later, and Liked videos. There is also a SUBSCRIPTIONS section with Popular on YouTube, Music, Sports, and Gaming. At the bottom of the sidebar, there are links for About, Press, Copyright, Creators, Advertise, Developers, +YouTube, Terms, Privacy, Policy & Safety, and Test new features.

RSA

BLOCKCHAIN

- Blockchain is well known for crypto currencies.
- It's an encrypted, decentralized, distributed database.
- Resistant to modification of data.

NEWS ANALYSIS

Blockchain's explosive growth pushes job skills demand to No. 2 spot

Blockchain development is the now second-hottest skill in the job market today, growing more than 200% since this time last year.

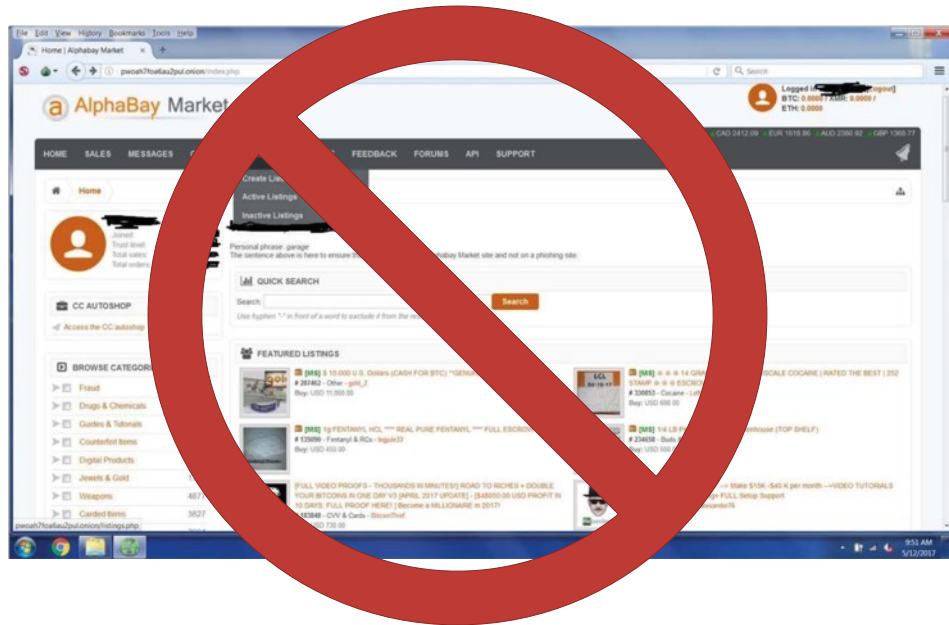

By Lucas Mearian

Senior Reporter, Computerworld | NOV 2, 2017 1:47 PM PT

WHY BLOCKCHAIN FOR FRAUDSTERS

- Shutdown of underground marketplaces AlphasBay and Hansa Market has forced fraudsters to find new ways to keep darknet sites running.

BLOCKCHAIN DNS

- Decentralized data storage is a great model for "bulletproof" DNS
- Blockchain DNS allows websites to retain a blockchain domain withstanding rerouting or prevent access by a central entity.
- Namecoin: .bit
- Emercoin: .bazar .coin .emc .lib

namecoin

is moving into blockchain-based domain name system. Because it's decentralized and has no central authority, it's resistant to domain locks and other abuse.

LINK: <http://>

Attention! "Blockchain DNS" Extension/Addon for browser is required to access the above .bazar link. All other links are fake/scam/clone sites (except private domains)!

Don't know how to browse .bazar links? It's very simple!

Install "Blockchain DNS" Browser Extension/Addon for .bazar blockchain-based domains surfing from here: <https://blockchain-dns.info/>

Keep in mind that the browser may trigger the search operation if you type "bazar" in the address bar.

There are two ways to fix that:

1. Type the domain with a trailing slash, example: "bazar/".
2. Type the domain with the protocol, example: "http://bazar".

You can also use these browser extensions/addons for .bazar links browsing:

Interest in Crowdfunding for Tralfamadore: A Decentralized DNM on the Ethereum Blockchain

 submitted 4 months ago * (last edited 3 months ago) by [BillyOnTralfamadore](#)

-----BEGIN PGP SIGNED MESSAGE-----

Hash: SHA512

We're currently developing Tralfamadore: a decentralized darknet market running on the Ethereum blockchain. It's fairly far along in development: we have the backend smart contract (Tralfamadore) working and the simple demonstration html frontend (The Directory) has nearly all features added. The major steps we need to take are design and security-testing.

The listings, vendors, sales, reviews, and escrows on this market are all decentralized. This means they can never be taken down, money in escrow can never be taken by market owners, and any frontend market can access the backend database, meaning no market will prevail simply because it has more listings. It's a much different design than current markets: there are no accounts so purchases, purchase actions, and orders are all controlled by your ethereum wallet. The system requires no advanced Ethereum knowledge for buyers and vendors--not even copy-pasting contract ABI's. Frontend markets make money by mediating escrows and through referral commissions set by a vendor for each product. We will make it very easy for these frontend markets to "plug into" Tralfamadore.
